HARD SKILLS

- **Backend: Python, Django, Django REST Framework, FastAPI, Celery, asyncio**
- **Databases: PostgreSQL, Redis, Django ORM, SQLAlchemy**
- **API & Auth: REST API, OpenAPI / Swagger, JWT, OAuth 2.0, Google OAuth, Firebase Auth**
- **Integrations: Google Calendar API, Telegram Bot API (aiogram)**
- **DevOps: Docker, Docker Compose, Gunicorn, Linux, Git, GitHub Actions, Heroku**
- **Testing & Quality: Pytest, Ruff, mypy**
- **Frontend: HTML, CSS, JavaScript, Bootstrap 5**
- **Familiar with: Kafka, WordPress**
- **AI tools: Claude Code, prompt engineering**

LANGUAGES

- Ukrainian (Native)
- English - B1 (EF SET: reading & writing B2)

COURSES

- Python Developer CyberBionic Systematics (2025)
- Django Essential ITVDN (2026)
- Claude Code 101 Anthropic (2026)

PROFILE

Python backend developer specializing in Django and Django REST Framework. I build REST APIs on PostgreSQL, run background jobs with Celery and Redis, and integrate third-party services such as OAuth providers, Firebase and Telegram. I take projects from an empty repository to production and keep supporting them after launch. I write well-tested code with docstrings and setup guides, so other developers can pick it up.

EXPERIENCE

Python Backend Developer

NDA · Part-time — Nov 2025 – Nov 2026

Stack: Python, Django, DRF, PostgreSQL, Celery, Redis, aiogram, Firebase, Docker, Pytest

EdTech platform

- Built the platform backend: groups, enrollment, lessons, homework review, exam grades and student progress
- Built a REST API for a React frontend with Firebase Authentication
- Built two Telegram bots on aiogram: a public bot for new requests and a staff bot with new-lead alerts, both feeding the admin
- Integrated Google Calendar (OAuth 2.0, encrypted tokens)
- 390+ automated tests

Internal admin system

- Implemented role-based access for 5 roles, deny by default
- Automated PostgreSQL backups with restore checks
- Deployed and maintained it on a VPS (Docker Compose, Gunicorn, SSL); fixed a production CSRF bug caused by the proxy sending the Origin header twice, and an SSL renewal failure caused by a misrouted ACME challenge
- 300+ automated tests

PROJECTS

VyshyvankaDaily GitHub link Live

Stack: Python, Django, PostgreSQL, HTML/CSS/JS, Google OAuth, Brevo, Heroku, GitHub Actions, Pytest

- Built and launched a bilingual (uk/en) web app with a daily ornament for each of Ukraine's 27 regions, made by a deterministic SVG generator
- Fixed a race condition in daily generation, added rate limiting and a strict CSP; security headers A+, OWASP ZAP and StackHawk findings fixed
- PageSpeed 100/100/100/100 (CSS cut from 31 KB to 7 KB); GitHub Actions CI, daily backups, 300+ tests
- Added Sentry error monitoring, Google OAuth sign-in and email verification via Brevo

EDUCATION

Bachelor's degree, Computer Science — 2024 – 2028

Donetsk National University
